ENVIRONMENT DIAGRAMS & HIGHER-ORDER FUNCTIONS

COMPUTER SCIENCE MENTORS 61A

September 9 – September 13, 2024

1 Environment Diagrams

1. Give the environment diagram and console output that result from running the following code.

```
def swap(x, y):
    x, y = y, x
    return print("Swapped!", x, y)

x, y = 60, 1
a = swap(x, y)
swap(a, y)
```

2. Draw the environment diagram that results from running the following code.

```
def funny(joke):
    hoax = joke + 1
    return funny(hoax)

def sad(joke):
    hoax = joke - 1
    return hoax + hoax

funny, sad = sad, funny
result = funny(sad(2))
```

2 CSM 61A FALL 2024

1. Give the environment diagram and console output that result from running the following code.

```
x = 20
def foo(y):
    x = 5
    def bar():
        return lambda y: x - y
    return bar

y = foo(7)
z = y()
print(z(2))
```

2. Fill in the blanks (*without using any numbers in the first blank*) such that the entire expression evaluates to 9.

```
(lambda x: lambda y: ______) (_____) (lambda z: z*z) ()
```

3. Write a function, whole_sum, which takes in an integer, n. It returns another function which takes in an integer, and returns True if the digits of that integer sum to n and False otherwise.

def	<pre>whole_sum(n):</pre>		
	11 11 11		
	>>>	whole_sum(21)(777)	
	True		
	>>>	whole_sum(142)(10010101010)	
	Fals	se	
	" " "		
	def	check(x):	
		while:	
		last =	
		return	
	return		

4 CSM 61A FALL 2024

4. Write a higher-order function that passes the following doctests.

Challenge: Write the function body in one line.

```
def mystery(f, x):
    11 11 11
    >>> from operator import add, mul
    >>> a = mystery(add, 3)
    >>> a(4) # add(3, 4)
    >>> a(12)
    15
    >>> b = mystery(mul, 5)
    >>> b(7) # mul(5, 7)
    35
    >>> b(1)
    >>> c = mystery(lambda x, y: x * x + y, 4)
    >>> c(5)
    21
    >>> c(7)
    23
    11 11 11
```

5. What would Python display?

```
(a) > (lambda x: x(x)) (lambda y: 4)
```

```
(b) > (lambda x, y: y(x)) (mul, lambda a: a(3, 5))
```
