October 5, 2026 – October 9, 2026

1 Gleam basics

1. Implement `prune_even`, which prunes every branch in a tree that has an even label. Odd child branches of branches with even labels are not preserved.

```
pub fn prune_even(tree: Tree(Int)) -> Tree(Int) {
    let Tree(label, branches) = tree

    let remove_even = list.filter(branches, _____________________________)
    let prune_children = list._________(_____________________________)

    Tree(label, prune_children)
}
```

```
pub fn prune_even(tree: Tree(Int)) -> Tree(Int) {
    let Tree(label, branches) = tree

    let remove_even =
        list.filter(branches, fn(branch) { branch.label % 2 != 0 })
    let prune_children = list.map(remove_even, prune_even)

    Tree(label, prune_children)
}
```
